Dealing with missing values	2

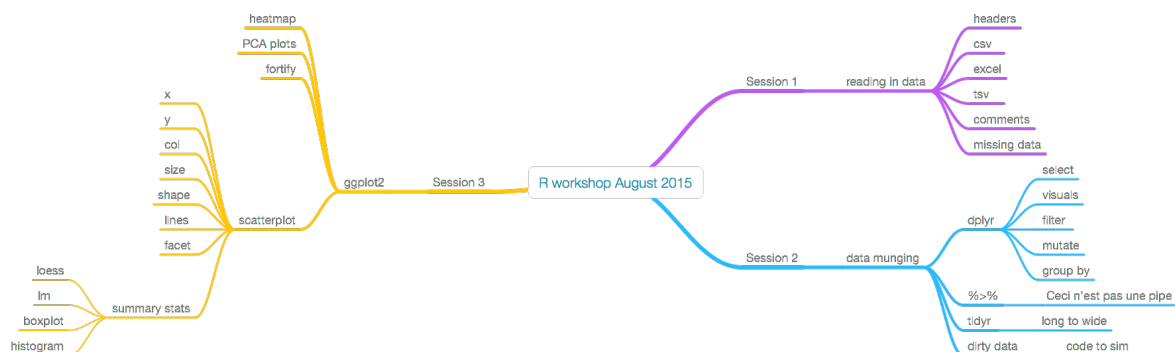

In this session we will show you a few ways to get data in from text files and excel files.

Getting the data

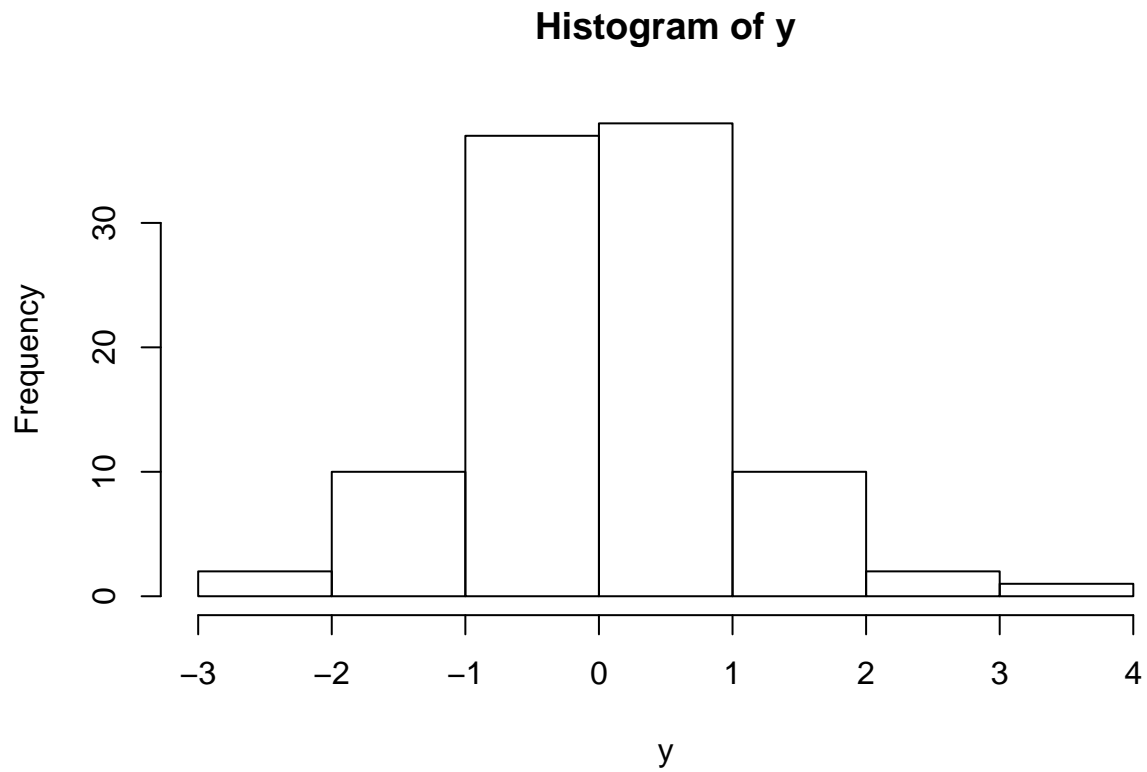

First we need to download the data. The data is found in [here.xls](#)

```
y <- rnorm(100)
head(y)
```

```
## [1] 0.4414195 -2.4115018 -1.1537666 1.7445963 -0.6841716 -0.7301580
```

```
hist(y)
```

$$y = x^2$$

Using menu to load data

Using commands to load data
